2. Literature Review

1.Feedback & Evaluation – Lecturer's Assessment of the Project

The project analyzes the impact of Artificial Intelligence (AI) on the job market, focusing on three main aspects: job displacement, the emergence of new job opportunities, and changes in job requirements and skills.

The evaluation will consider the quality of data cleaning and preparation, the effectiveness of data modeling, the accuracy of DAX measures and calculated columns, and the design and functionality of the Power BI dashboard.

The project will also be assessed based on its ability to identify meaningful employment trends, highlight skills in growing demand, and present clear, data-driven insights into how AI is transforming the labor market.

2.Suggested Improvements– Areas for Enhancement

1. **Data Quality:** Improve data accuracy by handling missing values, duplicates, inconsistent formats, and incorrect data types.
2. **Data Modeling:** Build an efficient data model with appropriate relationships to support accurate analysis across job categories, industries, skills, and time periods, where available.
3. **Advanced Analysis:** Analyze jobs that are declining or at risk of automation, emerging job opportunities, and changes in the skills and qualifications required by employers.
4. **DAX Measures and Calculated Columns:** Develop appropriate calculations and indicators based on the available dataset to compare job trends, AI exposure, and skill requirements.
5. **Dashboard Development:** Create an interactive Power BI dashboard using suitable KPIs, charts, slicers, and filters to present the findings clearly.
6. **Actionable Insights:** Provide evidence-based recommendations to help job seekers, employers, and decision-makers understand changing labor-market needs and identify opportunities for upskilling and reskilling.
7. **Testing and Validation:** Validate data transformations, model relationships, calculations, and dashboard interactions to ensure reliable results.

3. Final Grading Criteria – Breakdown of Marks

Assessment Criteria	**Description**	Marks
Documentation	Project objectives, dataset description, methodology, data preparation, and analytical findings.	20
Implementation	Data cleaning, data modeling, DAX measures, calculated columns, and Power BI dashboard development.	35
Testing and Validation	Accuracy of calculations, data consistency, model relationships, and dashboard functionality.	20
Presentation	Clarity of the presentation, visualization quality, explanation of findings, and discussion of conclusions.	25
Total		100

The final grade will be based on the technical implementation, analytical quality, accuracy of results, documentation, and effectiveness of the project presentation.
